Summary

AWS Cloud Engineer with 4+ years of specialized experience building Amazon Connect contact center solutions and serverless AWS architectures. Deep expertise in Lex V2 bot design, Lambda integrations, CDK infrastructure, and end-to-end IVR development. Proven track record delivering high-volume, enterprise-grade call center systems for government and commercial clients. Currently expanding into agentic AI — building autonomous customer service systems, multi-agent orchestration pipelines, and AI-powered personal tooling using Bedrock, Claude, and the broader LLM ecosystem.

Work Experience

Client: Amazon ProServe (Satellite/Telecom Project) | Oct 2025 – Apr 2026

Two-phase engagement: initial pilot deployment to production, followed by an enhanced follow-on deployment

- **Built the Amazon Connect IVR call flows** for a greenfield contact center supporting the satellite communications rollout
- **Lex bot** to capture and classify reason-for-call, routing callers to the appropriate agent queues within Amazon Connect
- **Post-call survey** solution that automatically transfers callers into an IVR survey interaction upon agent disconnect
- Operated within AWS **GovCloud** with strict environment constraints throughout both deployment phases

Client: Social Security Administration (SSA) | October 2024 – Oct 2025

Extremely high-volume government call center modernization

- **Lexbot Self-Service** bots enabling callers to complete transactions without agent assistance; each bot built as a single sequential intent using session attributes to manage conversational state
- **Spam Blocker / Vocal CAPTCHA** - Lambda generates a random number, Lex captures the caller's verbal response, and verifies a match before allowing the call to proceed; significantly reduced inbound spam call volume
- **CloudWatch Metrics, Alarms & Dashboards** - Preemptive monitoring - 5 lambda errors in a 1 minute interval triggers an alarm, which triggers lambda and SES/SNS. Dashboard for visibility for which and when.

FirstFire | AWS Connect Cloud Engineer II | Jan 2024 – October 2024

- **QuickSight Dashboards** - Iceberg tables via RAM resource share Connect Data Lake, as well as traditional pipeline via Kinesis > Firehose > S3 > Athena > QuickSight for CTR, Agent-Events data and real-time metrics for business insights.
- **Channel Hopping Solution** - Built a voice-to-chat handoff feature allowing callers to switch from a voice call to a text/chat agent session, reducing perceived wait times during high-volume periods
- **Customer Validation** - Queried backend databases to retrieve caller PII, enabling agents to verify customer identity before engagement; reduced average call authentication time and improved customer experience

Aspen Tech Group Inc | Cloud Engineer | Apr 2021 - Jul 2023 | Grand Junction, CO (Remote)

Entry-level AWS role where I built a broad foundation across serverless AWS services and Amazon Connect. Worked under a lead architect who mentored the team through code reviews and task decomposition.

- **Frontend Control Panels** - Built custom contact center agent dashboards, single page frontends in ReactJS with CRM integrations, so lambdas update through **API integrations**. Hosted on AWS (S3/CloudFront).
- **CRM & Ticketing Integrations** - Serverless automation eliminating manual ticket creation, reducing average case resolution time by ~40% through **API integrations** with Jira, Zendesk, and other platforms via Lambda, API Gateway, DynamoDB, etc.
- **Reporting & Analytics Pipelines** - Orchestrated caller metrics data pipelines using Kinesis, S3, and Lambda to support analytics and data science workflows
- **Voicemail Solutions** - Built voicemail capture recording, transcribe, then email to agent, queue, or team.
- **Deployment Templates** - Created reusable CDK and CloudFormation deployment templates with CodePipeline for seamless solution updates across client environments

AI Projects

Personal projects building hands-on experience across the AI/ML stack:

- **Agentic Customer Service Bot** — Autonomous voice-capable agent handling end-to-end customer interactions; S3-backed knowledge base for retrieval, API Gateway integration for external tool use
- **Multi-Agent Personal Assistant** — Orchestration layer connecting 30+ tools across Gmail, Google Calendar, and other services; agents chain tool calls autonomously to complete multi-step tasks
- **Personal Knowledge Base** — Document ingestion, embedding, hybrid semantic + keyword retrieval with CrossEncoder re-ranking; query expansion via LLM

- **Financial Data Aggregator** — Real-time dashboard pulling from 6+ financial institutions via Plaid and direct APIs; historical snapshots for trend tracking

Skills

Programming: JavaScript, TypeScript, Node.js, ReactJS, Python, REST APIs

AWS (Serverless Services): Lambda, DynamoDB, Amazon Connect, Lex V2, CDK, CloudFormation, S3, API Gateway, Step Functions, Kinesis, Firehose, CloudFront, CloudWatch, Cognito, IAM, SQS, SNS, SES, Pinpoint, Athena, Glue, QuickSight

Practices: Agile/Scrum, Git (feature branch workflow), PR reviews, IVR design, bot architecture, GovCloud environments

Clearance: Public Trust

Certifications

- AWS Solutions Architect Professional
- AWS Developer Associate
- AWS AI Practitioner Associate
- AWS Machine Learning Associate
